

Alexander Josue Suclupe Paucar

San Martin de Porres, Perú · [linkedin.com/in/alexanderjosuesuclupepaucar](https://www.linkedin.com/in/alexanderjosuesuclupepaucar) · +51 977 402 928 · alexanderjosuesuclupepaucar@gmail.com

*Information Systems Engineering graduate with experience in **web development, data analysis, and process automation**. I have worked with technologies such as **React.js, Node.js, Python, SQL, and Power BI**, participating in the development of web applications, integration of machine learning models, and cloud deployment.*

*I stand out in **building intuitive interfaces, data management and visualization, and report automation for decision-making**. I have experience collaborating in multidisciplinary teams, managing user requirements, and ensuring data quality and availability.*

*I am characterized by **attention to detail, continuous learning ability, and results-oriented mindset**, contributing to process improvement and technological innovation in dynamic environments.*

PROFESSIONAL EXPERIENCE

Compañía Peruana de Radiodifusión (América Multimedia)

Lima, Peru

Pre-Professional QA Intern – América Digital Area

April 2025 – December 2025

- **Quality Assurance (QA):** Executed QA testing on digital systems before production release, ensuring platform stability and functionality.
- **Test automation:** Developed automated testing scripts to validate critical functionalities, reducing manual testing time and improving QA coverage.
- **Technical documentation:** Produced clear and structured documentation of technical processes and operational workflows, improving traceability and team understanding.
- **Development support:** Assisted the development team with integration and maintenance of digital systems using collaborative tools and coding best practices.
- **Process optimization:** Analyzed recurring operational issues and proposed automated solutions to improve internal efficiency.

Affinity Latam Solutions

Lima, Peru

Pre-Professional IT Support Intern – Technology

March 2024 – August 2025

- **Process automation:** Developed Python scripts to automate insurance policy downloads and document modification, reducing execution time from hours to minutes.
- **Dynamic document generation:** Built an automated Python system using SQL database data to modify Word documents in real time, improving efficiency and accuracy in policy creation.
- **Reporting and data validation:** Automated data transfer and Excel report generation, applying filters and validations to ensure data quality and reliability.
- **Workflow optimization:** Implemented solutions that streamlined interdepartmental processes and improved data reliability, reducing processing time from 6 hours to 2 hours per week.

ADDITIONAL SKILLS

- React.js (Intermediate): Responsive interfaces and reusable components
- Node.js (Basic–Intermediate): API development and backend logic
- Python (Intermediate): Pandas for data cleaning, transformation, validation, and automation
- SQL (Intermediate): JOIN queries, aggregations, and relational database management
- Advanced Excel: Pivot tables, Power Query, dashboards, and report automation
- Power BI: Data modeling, KPI creation, and interactive dashboards
- Data management and basic ETL processes
- Version control: Git
- Testing and quality assurance: Data validation and functional testing
- Agile methodologies: Scrum and Kanban

FEATURED PROJECTS

Universidad Peruana de Ciencias Aplicadas

Lima, Peru

Team of 2 | Course: Performance Workshop I

March 2025 – July 2025

- Built the frontend interface with React.js for clinical data entry and personalized recommendation visualization.
- Developed a full-stack architecture using Node.js with secure JWT authentication.
- Integrated a recommendation model built in Python for real-time data exchange.
- Designed a smart form that generates automated nutrition recommendations based on clinical and lifestyle data.
- Health-focused application promoting better habits among university students.
- Deployed on Azure Web App, ensuring public availability. <https://nutriscanu-frontend-v2-f6cghrghtfgdqah.brazilsouth-01.azurewebsites.net/>

Universidad Peruana de Ciencias Aplicadas

Lima, Peru

Team of 5 | Course: Business Predictive Analytics

July 2024 – December 2024

- **Desarrollo de modelo de predicción y validación de datos:** Trabajé en la creación de un modelo predictivo utilizando Python y bibliotecas como pandas y scikit-learn. Durante el proceso, validamos y limpiamos los datos para garantizar que fueran precisos y consistentes, lo cual es crucial para el desarrollo de modelos de Calidad.
- **Generación de insights clave:** Desarrollamos análisis exploratorios para identificar patrones en la base de datos, como las características de las personas más propensas a desarrollar diabetes (edad, género, antecedentes familiares, etc.), y qué acciones se podrían tomar para prevenir la enfermedad
- **Análisis de resultados y recomendaciones:** Además de la predicción, el equipo desarrolló un conjunto de **recomendaciones de salud** para aquellas personas identificadas como de alto riesgo, basadas en los insights obtenidos del análisis de datos.
- **Implementación del modelo de detección:** Creamos un modelo predictivo basado en algoritmos de clasificación para identificar con precisión a las personas con alto riesgo de diabetes. Este modelo fue implementado y probado, y utilizamos métricas de rendimiento como la precisión y la curva ROC para evaluar su efectividad

- Designed and developed a modern responsive portfolio website using React.js and Vite.
- Implemented multilingual support (Spanish/English).
- Automated deployment with GitHub Pages.
- Improved user experience with dark/light mode and responsive design.
- Built a dynamic section to showcase featured projects: <http://alexanderjosu.github.io/Portafolio-Alexander-Suclupe/>
